Challenge #12: How Tos (Addon) - Optional

1. TRIGGER BUTTON ON ENTER
   -After a successful login or register, there will a popup message on the top of the page.

2. RESPONSIVE TABLE
   -To make this I only put "overflow-x auto" on its style and it's doing its job.

3. ADD CLASS
   -Its function is to show the hidden nav menus on the left side of the page.

4. PLACEHOLDER COLOR
   -This can be seen on the contact form.

```css
.message-box textarea::placeholder {
    color: #38d089;
    font-weight: 500;
}
```

5. REMOVE CLASS
   -Its function is to remove the nav menu when shown.

```js
navClose.addEventListener("click", () =>{
    navBar.classList.remove("nav-active");
});
```
